OUTLANDER PHEV

# TAKE CHARGE OF YOUR LIFE.

You deserve to make the most of every trip, whether it's going to and from work or venturing to new destinations. At Mitsubishi Motors, our 100-year history of automotive excellence led us to the Outlander PHEV (plug-in hybrid electric vehicle), the ideal vehicle for your ever-changing lifestyle. An overnight charge at home gives you a driving range of 22 miles, perfect for everyday driving. Super All-Wheel Control gives you stability and handling for all road conditions. And as a crossover with ample space, you can take plenty while you take on what's coming up next. Because every day is an adventure. It's time to start treating it like one.

## HANDLE ANY ROAD IN ANY WEATHER.

### SUPER ALL-WHEEL CONTROL

Outlander PHEV is the only plug-in hybrid electric vehicle in its class<sup>2</sup> with four-wheel drive technology. Mitsubishi's Super All-Wheel Control (S-AWC) is one of the most technologically advanced four-wheel drive systems in production and speaks to our decades of rally heritage. The specialized version of S-AWC on Outlander PHEV gives you efficient, electric power and control in all road conditions.

### SMOOTH LINEAR RESPONSE

The S-AWC system, only available from Mitsubishi Motors, optimally manages Active Yaw Control (AYC), Anti-lock Braking System (ABS), and Active Stability Control (ASC) with Traction Control (TCL) to bring out the full potential of Twin Electric Motor 4WD without compromising safety, comfort, or fuel efficiency. The full-time, high-output electric Twin Electric Motors mounted at the front and rear axles instantly supply torque on demand for responsive, yet smooth 4WD performance.

Together, the Twin Electric Motor S-AWC teams with the PHEV drivetrain to supply optimal torque and traction to each wheel for powerful acceleration and stable handling.

## PHEV SYSTEM

# SMART, EFFICIENT DRIVING.

## DRIVE MODES

There's no guesswork involved. In Outlander PHEV, the most efficient drive mode is automatically selected, depending on how much power you need and your battery charge level, so all you have to do is drive.

## EV MODE

In EV mode, the Twin Electric Motors drive the vehicle with energy supplied exclusively by the lithium-ion main drive battery. Because no fuel is used, the engine remains untouched, which means you can enjoy a quiet drive with all-electric power and produce zero CO2 emissions. In the default mode, you can utilize eco-friendly driving for your commute, errands, and other day-to-day activities.

## SERIES HYBRID MODE

When more power is needed, Outlander PHEV seamlessly transitions to Series Hybrid mode. For additional acceleration or for driving uphill, the Twin Electric Motors are powered by the battery and 2.0-liter gasoline engine. In this configuration, the gasoline-powered generator provides added power while also charging the lithium-ion battery pack. This mode is also activated when the battery pack is low on charge.

## PARALLEL HYBRID MODE

Parallel Hybrid mode uses all of Outlander PHEV's available resources for its highest level of performance. In this mode, the 2.0-liter gasoline engine drives the front wheels when the main drive battery is depleted. The gasoline-powered engine/generator then feeds any excess energy (electricity) back into the lithium-ion battery pack for later use. Parallel Hybrid mode is the most efficient drivetrain mode while going at high speeds for long distances, such as on the open road or highway.

## PHEV SYSTEM

# QUICK TO POWER. FUN TO DRIVE.

## CHARGING AND BATTERY

### CHARGING OPTIONS

There are three ways to charge Outlander PHEV: Level 1 charging, Level 2 charging, and DC Fast Charging. Depending on your location and needs, you're never far from getting a quick boost. For Level 1 charging, the main drive battery can be fully charged with a standard 120V household outlet in less than eight hours with the supplied charging cable. For Level 2 charging, at a public or residential 240V charging station, a full charge can be accomplished in less than four hours.

Outlander PHEV is the only plug-in hybrid with DC Fast Charging capability.<sup>3</sup> By giving you multiple options to charge, the world is yours to explore with pure electric power. At public CHAdeMO charging stations, the main drive battery can reach up to 80% capacity in approximately 25 minutes. You can get the exact amount of power you need by watching the charging status displayed on the high-contrast energy meter.

### DRIVE BATTERY

The main drive battery in Outlander PHEV is a high-capacity 12kWh lithium-ion battery pack developed specifically for the vehicle. It's safely located in a dustproof, waterproof encasement beneath the passenger floor and between the front and rear axles, so there's no intrusion to the interior cabin. While it powers all Outlander PHEV models in EV mode, GT models can tap directly into the main drive battery for power on-the-go with its two AC outlets.

# ALL OUTLANDER. DISTINCTLY PHEV.

## EXTERIOR STYLING

Outlander PHEV's exterior maintains its heritage but with a restyled, upscale twist.

PHEV-UNIQUE FRONT GRILLE

HALOGEN FRONT FOG LAMPS WITH GLOSS BLACK BEZEL

18" TWO-TONE ALLOY WHEELS WITH EXCLUSIVE WHEEL DESIGN

## ROOM TO RELAX. TECH TO ENJOY.

### INTUITIVE FEATURES

Inside Outlander PHEV, you'll find luxurious amenities and generous legroom, as well as intelligent features. Standard premium leather seating adds to the driving experience, while the second row can be folded for all the room you need. Dual USB ports make charging smartphones for you and a friend simple. For both entertainment and vehicle info, look to the Smartphone Link Display Audio System that supports Apple CarPlay™ and Android Auto™; plus, it displays energy usage, charging data, and more. Outlander PHEV offers features that serve both style and purpose.

### SMARTPHONE LINK DISPLAY AUDIO SYSTEM

The Smartphone Link Display Audio System<sup>1,2</sup> does more than offer safe access to apps through Apple CarPlay™ and Android Auto™. In addition to streaming HD radio and songs over Bluetooth® and giving you clear navigation from your preferred app, the 7" touchscreen on the Outlander PHEV provides real-time data for your plug-in hybrid so you can monitor how much EV power you're using, your average MPG, and battery capacity from regenerative braking. It also shows the energy flow for your current drive mode, EV miles to empty, and much more.

### LEATHER SEATING

The elevated standard of Outlander PHEV can be fully felt in its leather seating and steering wheel.

### WELL-EQUIPPED STEERING WHEEL

Phone and audio controls on the steering wheel keep your hands where they need to be, while the optional heated steering wheel makes them warm and cozy.

### ROCKFORD FOSGATE® PREMIUM AUDIO SYSTEM

The available Rockford Fosgate® premium sound system pumps up to 710 watts through nine speakers—including a 10-inch dual voice-coil subwoofer with Punch Control®—to deliver deep, rich bass and crystal-clear highs.

# FOR HANDS-ON HYBRID DRIVING.

## PHEV-UNIQUE TECHNOLOGY

### BATTERY CHARGE

Outlander PHEV has driver-selected modes to give you hands-on control of how much you use your battery. In Battery Charge mode, the engine will generate electricity to charge the lithium-ion main drive battery.

### BATTERY SAVE

In Battery Save mode, Outlander PHEV conserves energy in the lithium-ion main drive battery by operating in hybrid mode. Battery Save mode is best used on the highway or in urban traffic so the engine/generator powers the vehicle, saving battery charge for driving in residential areas. It can only be activated when the battery pack level falls below 90% full.

### EV PRIORITY MODE

Select EV Priority mode to reduce both fuel and electricity usage for increased efficiency. EV Priority mode is ideal for all-electric driving, zero fuel consumption, and a quiet ride without engine noise. Outlander PHEV automatically exits this mode if you enter Battery Charge mode or Battery Save mode, or simply need to accelerate.

### 4WD LOCK

The Twin-Motor 4WD Lock button can be selected to simulate locking of a center differential and optimally distribute torque to all four wheels for improved traction and stability. This improves drivability on wet, rough, and snow-covered roads.

### REGENERATIVE BRAKING

Regenerative braking occurs when the vehicle is in motion while the accelerator is not being pressed (coasting), or when the driver engages the brakes by pressing the brake pedal. During deceleration (braking), the front and rear electric motors function as generators so that electricity can be generated and fed back into the lithium-ion battery pack. The level of regenerative braking can be conveniently selected at any time using the steering wheel paddle shifters or the advanced EV shift lever. Regenerative braking is most useful in the city or in stop-and-go traffic for charging while you drive.

### SMARTPHONE EV REMOTE CONTROL

On your smartphone, you can download the Outlander PHEV II app to communicate directly with your Outlander PHEV. Set up charge start and stop times for a charging schedule that fits your lifestyle, cool and heat the cabin remotely, check your car's state of battery charge, and more.

DOWNLOAD THE APP HERE:

### ADDITIONAL EV FEATURES

The high-contrast energy meter shows your drive mode and energy flow being used by the Outlander PHEV, charging indicator, regenerative braking warning, and other information on its display. The Smartphone Link Display Audio System, aside from its entertainment functions, shows charging costs for your vehicle and in-depth eco information, such as ratio of EV usage and gas consumption. The information you need on your Outlander PHEV is always readily available.

## FOR UPGRADED ADVENTURES.

### FEATURES FOR EVERYDAY AND BEYOND

Along with its energy-efficient technology, Outlander PHEV also has features for your driving convenience. The FAST-Key entry system makes entering your vehicle easy. With your keys in your pocket or purse, one push on the driver's door handle will unlock it, and two pushes will unlock all doors. The power liftgate adds to your convenience by opening or closing with the key fob or buttons on the dashboard or liftgate.

Inside, you'll revel in the customized comfort of the dual-zone automatic climate control. With separate temperature controls for the driver and passenger, you can adjust the environment precisely to your liking. In cold weather, the windshield wiper de-icer keeps wiper blades from freezing onto the windshield. And for increased ambiance, the available glass sunroof opens up to the world around you.

### AC POWER OUTLETS AND CARGO FOR ALL

Outlander PHEV is your eco-friendly adventure vehicle with its available AC power outlets. The two outlets, located in the rear seat and cargo area, tap directly into the main drive battery for a combined 1500W to power whatever you need. Upgrade camping trips with a coffee maker, toaster, or electric grill for at-home comfort outdoors. And for an amped-up tailgating experience, plug in an LED TV, speakers, or a mini fridge. There are unlimited uses for portable power wherever you go with the PHEV.

The PHEV has up to 78.0 cubic feet of cargo space to fit what you need while being eco-friendly.

### TOWING CAPACITY

Outlander PHEV's 1,500 lbs. towing capacity means you can bring a personal watercraft or pop-up camper on your next adventure.

# TECHNOLOGY TO KEEP YOU SAFE.

## KEEPING YOU ON YOUR PATH

The features on the Outlander PHEV go beyond being environmentally friendly. Your safety is our utmost priority, so we have all the equipment to protect you from the unexpected. Outlander PHEV's standard Supplemental Restraint System (SRS) features seven airbags, including dual-stage front airbags with a driver's seat position sensor. Along with rain-sensing wipers, available LED headlights and fog lights to illuminate your path, and advanced technology such as Adaptive Cruise Control and Lane Departure Warning, you can drive with confidence knowing you're protected.

### BLIND SPOT WARNING AND LANE CHANGE ASSIST

Together Blind Spot Warning and Lane Change Assist<sup>6</sup> alert you when a vehicle is in or approaching your blind spot. When a vehicle in the next lane is traveling at the same speed or faster in the detection areas, a warning light will illuminate in the corresponding side mirror. If your turn signal is on, the warning light on the corresponding mirror will blink and the system will beep three times to alert you that it is unsafe to change lanes.

### ADAPTIVE CRUISE CONTROL

The available Adaptive Cruise Control (ACC)<sup>8</sup> system uses radar technology to judge distances between you and the vehicle ahead, helping you maintain a safe driving distance for greater safety and peace of mind. If the car moves out of your lane or goes beyond your set speed, the system will resume your set speed.

### MULTI-VIEW CAMERA SYSTEM

This advanced feature uses multiple cameras around the vehicle to create a composite, bird's-eye view of your Outlander PHEV in addition to a wide-angle view, to help show what's directly behind you when you reverse.<sup>9</sup>

### REAR CROSS TRAFFIC ALERT

When the Rear Cross Traffic Alert system<sup>6</sup> detects a vehicle approaching from the side while you're backing up, the warning lights on both side mirrors will blink, a buzzer will sound to alert you, and a warning message will appear on the information screen of the multi-information color display.

### FORWARD COLLISION MITIGATION

The Forward Collision Mitigation (FCM) system<sup>7</sup> utilizes both laser radar and camera technology to determine if a frontal collision with a vehicle or pedestrian is imminent. If so, it warns the driver with audible and visual signals, and automatically applies moderate to emergency braking to reduce the severity of the collision and, if possible, prevent the collision.

### LANE DEPARTURE WARNING

The Lane Departure Warning (LDW) system<sup>10</sup> uses an onboard camera to monitor lane position in front of the vehicle audibly and visually, alerting the driver if it detects the vehicle leaving its lane unintentionally.

### AUTO HIGH BEAM HEADLIGHTS

You don't have to worry about switching between low and high beams when driving in sporadically lit areas. Available Auto High Beam Headlights will do the work for you by automatically adjusting between the brightness levels depending on the surrounding light, so your hands stay safely on the steering wheel.

### REINFORCED IMPACT SAFETY EVOLUTION (RISE)

RISE engineering combines energy-absorbing front and rear structures with a rigid occupant cell. Along with reinforcing bars in the doors and energy-absorbing materials in the side pillars, the Outlander PHEV's RISE body features high-tensile strength steel that reduces weight while helping to protect you in the event of a collision.

## LET CHARGING FUEL YOUR LIFE.

Mitsubishi Motors' 100 years of engineering innovation mean we don't make vehicles simply for transportation. Our products are constantly improving in style, durability, and performance to elevate your experiences. As the world's best-selling plug-in hybrid crossover<sup>1</sup> and best-selling PHEV in Europe, Outlander PHEV is no exception.

It's designed to fit your lifestyle, with an overnight charge at home giving you a full battery or DC Fast Charging giving you a quick boost. All-electric power for everyday means fewer stops at the gas station, more quiet rides without engine use, and zero CO<sub>2</sub> emissions for environmentally- and budget-friendly driving.

When you need to rev up your life, the gasoline engine activates automatically, Super All-Wheel Control handles any road, and available AC power outlets amp up your outdoor adventures. Outlander PHEV is the plug-in hybrid with electric for your everyday and gas and crossover capability for much more.

## FOOTNOTES

- JATO Dynamics Global PHEV sales (September 2017)
- For the non-luxury plug-in hybrid electric vehicle segment (November 2017)
- Based on available JATO Dynamics Limited Car Specification USA Database (November 2017)
- Apple CarPlay, Siri, Apple Music and Apple Maps are trademarks of Apple Inc., registered in the U.S. and other countries.
- Android Auto, Google Maps and other marks are trademarks of Google Inc.
- The Blind Spot Warning, Lane Change Assist, and Rear Cross Traffic Alert systems are driver aids only and are not substitutes for safe and careful driving. Under certain circumstances, these systems may not detect other vehicles correctly.
- The Forward Collision Mitigation (FCM)/Pedestrian Detection (PD) system is a driver aid only and is not a substitute for safe and careful driving. Under certain circumstances, the system may not detect other vehicles and/or pedestrians correctly.
- The Adaptive Cruise Control system is not a collision avoidance system or an automatic driving system. It is designed to use only limited braking and is never a substitute for safe and careful driving. Never rely solely on the Adaptive Cruise Control system.
- The Multi-View Camera system is a driver aid only and is not a substitute for visual confirmation. The view on the screen is limited and objects outside that view will not be seen.
- The Lane Departure Warning system is designed to read the lane marks under certain conditions. It is not a collision avoidance system and is not a substitute for safe and careful driving.
- The 10-year/100,000-mile Powertrain Limited Warranty coverage terms are from the original in-service dates, and are applicable only to the original owner of new, retail models purchased from an authorized Mitsubishi dealer. Subsequent owners receive the balance of the New Vehicle Limited Warranty of 5 years/60,000 miles. In addition, the Mitsubishi Outlander PHEV has a fully transferable 10-year/100,000-mile warranty on PHEV components and the Main Drive Lithium-ion battery. See retailer for limited warranty and roadside assistance terms and conditions.
- Please check this website to confirm smartphones compatibility with Smartphone Link Display Audio System. (<http://www.iopinfo-sda.mitsubishi-motors.com/cs/bt/index.php>)
