

# THE MORGAN 3 WHEELER

# INTRODUCTION

When did you last regard a journey by motor car as an adventure? The Morgan 3 Wheeler is designed to bring the fun and passion back to personal transport. Lift the safety catch from the "bomb release" starter button, hear the massive twin cylinders detonate and choose your favourite destination.

The Morgan 3 Wheeler is designed for one purpose alone, to make driving fun. A leather padded cockpit complete with aircraft instrumentation adds to the sense of flying on the road. With an estimated 140 Newton metres of torque the motor provides maximum power at minimum revs. When coupled with a weight of 525kgs the 21st century Morgan 3 Wheeler provides unrivalled power to weight for its on the road price. The time is right for Morgan to take a new look at the combination of acceleration, performance and economy. The time is right to drive a Morgan 3 Wheeler.

Some things have not changed. Why change the shape when the Morgan 3 Wheeler still holds long distance speed records for one litre cars set in the 1930's? The pronounced aluminium bullet hull and the exposed tubular chassis are accompanied by the aeroplane profile of the car's sides. The shape is of a gentle yet powerful missile at the front leading to a beetle back tail at the rear. From the design viewpoint, the focus was set on making the car as close to an aeroplane as possible, while retaining handy extra space for driver, passenger and a hold-all in the rear.

The iconic design of the Morgan 3 Wheeler has been updated with 21st Century technology. The power train is a 1989cc 'V-twin' fuel injected engine mated to a Mazda 5 speed (and reverse) gearbox. This provides smooth "get in and drive" convenience with the thrill of extreme performance.

The Morgan 2014 improvement has led to a comprehensive review of the vehicle's characteristics, resulting in some important updates –

- Chassis - latest development increases torsional stiffness and improves handling
- Centre Drive Unit – increased durability and smoother power delivery
- Bevel box – isolated to improve overall noise vibration harshness (NVH)
- Steering – engineered to satisfy a broader range of markets internationally, eliminating bump
- Steer and increasing high speed stability
- Urban Cooling Pack – provides cool air to the engine in urban driving conditions
- Styling – comprehensive new graphics list, colour combinations and vented body work
- '30/30' Warranty – extended 30 months or 30,000 miles, terms and conditions apply
